**MONTAŽA ZAVRŠNIH PROFILA**

Za nesmetanu montažu završnih profila, oni moraju biti zaptiveni i montirani jedan na drugi. Za zaptivanje profila koristi se sredstvo za zaptivanje (butil traka).

Svi postupci sečenja moraju se obaviti na gradilištu. Uobičajena preklapanja dostižu do 10cm. Pravac poprečnih preklapanja određen je prevladajućim smerom vetrova i kiše. Pričvršćivanje se vrši pomoću samoreznih ili samoperforirajućih vijaka sa zaptivnom smešom.
